PROFESSIONAL SUMMARY

Security Analyst with 10 years of enterprise analytics experience transitioning into GRC and detection engineering. Hands-on experience with Splunk SIEM, MITRE ATT&CK TTP mapping, threat detection logic development, phishing analysis, and log-based investigations. Skilled in NIST 800-53, ISO 27001, SOC 2, and PCI control mapping, risk assessments, access reviews, and audit-ready documentation. Strong Python and SQL scripting background applied to detection validation, log parsing, and workflow automation. Proven ability to translate complex security findings into clear, executive-ready reporting for technical and non-technical stakeholders.

CERTIFICATIONS

CompTIA Security+ (2025) | ISC² Certified in Cybersecurity CC (2025) | Microsoft Azure Data Fundamentals (2024) | Google Advanced Data Analytics (2024)

CORE SKILLS

Security Operations: Splunk (SPL) | MITRE ATT&CK | Alert Triage | Detection Tuning | Threat Hunting | Incident Response | IOC Analysis | Log Analysis | SIEM

GRC & Compliance: NIST 800-53 | ISO 27001 | SOC 2 | PCI | Control Mapping | Risk Assessment | Access Reviews | RBAC | Audit Documentation | Policy Development

Scripting & Automation: Python | SQL | Bash | Pandas | NumPy | Detection Validation | Log Parsing | Alert Enrichment

Network & Endpoint: Wireshark | Windows Event Logs | Active Directory | Linux/Unix | Network Traffic Analysis | Phishing Analysis | Email Header Forensics

Data & Reporting: Power BI | Tableau | Excel | Power Query | ETL | KPI Dashboards | Stakeholder Reporting

SECURITY PROJECTS

Threat Detection Home Lab | Splunk, MITRE ATT&CK, Kali Linux, Python

- Engineered end-to-end detection coverage in Splunk by analyzing Windows Event Logs and authentication telemetry at scale, mapping attacker behaviors to MITRE ATT&CK TTPs including credential abuse (T1110), anomalous logon (T1078), and lateral movement (T1021).
- Developed and iteratively tuned detection rules scoped to specific TTPs, reducing false positives and improving signal fidelity across brute-force, privilege escalation, and persistence techniques.
- Executed controlled exploitation scenarios using Kali Linux and Metasploitable2 to generate realistic attacker telemetry, then validated detection coverage and tuned alert thresholds based on results.
- Reconstructed attacker kill chains in Wireshark to validate lateral movement paths and confirm segmentation controls, using findings to refine detection scope and response runbooks.

Detection Logic Automation & Alert Enrichment | Python, Splunk, MITRE ATT&CK

- Built a Python-based detection validation tool that ingests log data, runs it against detection rules, and outputs a coverage report mapping each rule to its MITRE ATT&CK technique.
- Implemented z-score and rolling baseline anomaly detection in Python to flag authentication log deviations and enriched alerts with user risk score, asset sensitivity, and geo-anomaly context.

Email Threat & Phishing Analysis | Python, VirusTotal, Splunk

- Analyzed simulated phishing campaigns in a controlled lab, performing header analysis (SPF, DKIM, DMARC), MIME inspection, and attachment detonation risk assessment to identify evasion techniques and detection gaps.
- Wrote Python scripts to automate email header parsing and IOC extraction, improving scalability of phishing detection workflows and reducing manual triage time.
- Documented findings in structured incident-style reports mapping TTPs to MITRE ATT&CK (T1566), enabling reusable detection logic and playbook development for SOC email triage.

NIST 800-53 Control Mapping & Risk Register

- Mapped business processes and security activities to NIST 800-53 controls across all domains to identify coverage gaps, control weaknesses, and remediation priorities.
- Built a control tracking framework documenting control status, exceptions, and mitigation actions; summarized findings in structured dashboards to support audit preparation and risk-based decision-making.

WORK EXPERIENCE

Independent Security Projects – *Security Analyst*

Jul 2024 – Present

- Conducted log-based security investigations across 1,000+ events in Splunk and Wireshark, identifying anomalous access patterns, brute-force activity, and risk indicators with 35% improvement in triage efficiency.
- Analyzed 20+ datasets using SQL, Python, and Excel to identify trends, anomalies, and data quality issues in support of risk-based analysis and security reporting.
- Built 5 interactive dashboards in Power BI and Tableau tracking KPIs, access patterns, and control metrics, reducing manual reporting time by 40%.

Bean Infosystems – *Senior Analyst*

Nov 2023 – Jul 2024

- Supported audit and compliance reporting by analyzing data trends, validating outputs against control standards, and ensuring alignment with internal policy and regulatory requirements.
- Identified process inefficiencies and irregular patterns using Python, Pandas, and SQL, generating risk-relevant insights that informed operational risk remediation.
- Developed automated reporting workflows in Power BI and SQL, reducing manual compliance reporting effort by 50% and improving response time to critical business and audit updates.
- Partnered with cross-functional stakeholders to translate complex data findings into clear, actionable compliance and operational recommendations.

Hudl – *Senior Data Operations Lead*

Jul 2017 – Oct 2022

- Led data validation and quality assurance workflows across multi-region operations, identifying recurring anomalies and improving reporting accuracy and reliability for cross-functional teams.
- Built Power BI and Tableau dashboards to monitor key operational metrics, supporting proactive risk identification and reducing backlog by 25%.
- Automated reporting, validation, and quality checks using SQL and Excel, reducing manual effort by 40% and improving data integrity and audit reliability.

SK Shetty & Co – *Account Operations Analyst*

Jun 2016 – Jul 2017

- Managed financial data reconciliation and compliance reporting for 20+ client accounts, reducing reporting errors by 42% through structured validation and audit-ready documentation.
- Identified control gaps and process risks in client workflows, delivering findings that reduced turnaround time by 30% and improved operational consistency.

Infosys – *System Engineer*

Jul 2014 – Apr 2016

- Managed high-volume (150M+ records) telecom database operations, supporting data quality monitoring and system integrity across enterprise infrastructure.
- Built Python automation workflows for testing and routine tasks, reducing manual effort by 30% and improving operational reliability.

EDUCATION

Bachelor of Engineering, Electronics & Telecommunications | University of Mumbai | 2010 – 2014
